Allowable Subject Matter

1. Claims 1-98 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: In interpreting the claims, in light of the specification and applicants' arguments, the examiner finds the claims to be patentably distinct from the prior art of record.

The prior art does not explicitly teach a system and method for providing data from a graphical user interface comprising an association including a data type and a software module identifier, wherein the data type indicates what type of data is included in the graphical code data. See specification, page 13, lines 3-16.

The examiner finds applicants' arguments presented January 6, 2006 to be persuasive. The applicants argued in substance that the prior art fails to teach that "the data type indicates what type of data is included in the graphical code data," citing as support for the amendment the specification, page 13. See Remarks, page 20. See also, pages 21-22.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Other Cited References

4. Meksavan et al., US Pat. No. 6,581,838 B1, is cited in the attached PTO-892 but not relied upon. Meksavan teaches a system and method for an optical scanner head for processing barcode data wherein the data packet transmitted from the barcode comprises a data type field indicating the barcode format type, e.g. UPC-A, UPC-E, EAN, etc. See Meksavan, col. 3, lines 38-67. The data type taught by Meksavan is distinct from the claimed invention in that Meksavan teaches indicating the type of the barcode itself, whereas the invention is limited to the type of data, e.g. name, address, URL, etc.
